BIOINFORMATICS INTERNSHIP

Session seventeen
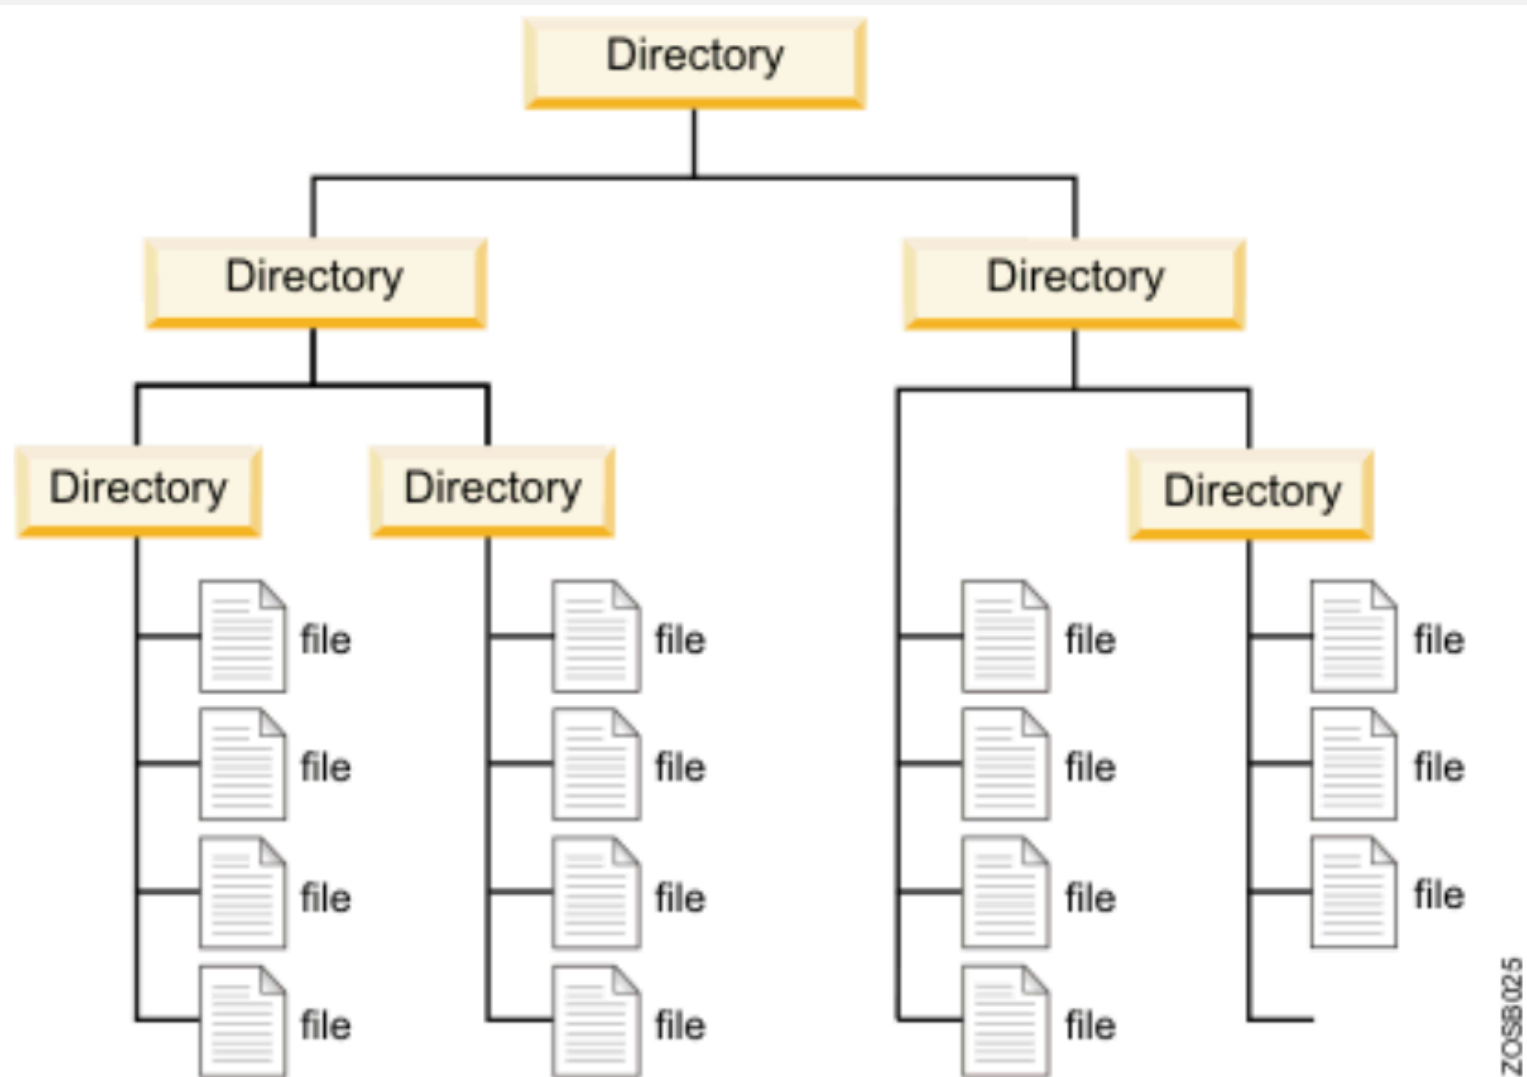

GRACE HOPPER

Pioneer of computer science

created the first compiler for computer languages

- a compiler renders worded instructions into code that can be read by computers

FILES

Comprised of bytes

1 byte = 8 bits

Bytes can represent two types of data:
1. Binary
2. Non binary (ASCII)

UNIT CONVERSIONS

- 1 kilobyte = 1024 bytes (small image)

- 1 megabyte = 1024 kilobytes (internet connections are a few mbs)

- 1 gigabyte = 1024 megabytes (flash drives are often 64 gb)

- 1 terabyte = 1024 gigabytes (computers can store)

- 1 petabyte = 1024 terabytes

- …exabyte, zettabyte, yottabyte

TO PRACTICE

- First create a directory called "lab2" to experiment in.
  - Create a few directories
  - Create a few empty files at multiple directory levels
  - Attempt to remove a directory with files
  - Remove an empty one
  - List files in another directory than your CWD with both an absolute path and a relative path
  - Copy and move files
  - Make a symbolic link to another file in a different directory, and name the symbolic link something different
